Summary

Driven software engineer passionate about building technology that creates meaningful impact. With professional experience in building scalable and high-performance mobile apps, strong adaptability, and a fast-learning mindset, I am focused on growing into AI engineering and contributing to intelligent, real-world products.

Education

Institute of Business Administration (IBA)
BS Computer Science

09/2020 - 06/2024

Experience

Upwork

Remote

Mobile App Developer

12/2024 - 06/2025

- Enhanced and integrated a fitness app in Flutter for **iOS**. Integrated **30+ APIs** implemented **4 third-party services**, and supported dual-role workflows.
- Built 27 mobile screens and implemented secure authentication using **Firebase** and **Sign in with Apple**.
- Integrated scheduling workflows via **Calendly**, payment testing through **Stripe sandbox**, and filter-based coach discovery experiences.
- Developed backend REST APIs using **Adonis JS** due to its structured **MVC architecture** and built-in authentication support, deployed the app on an **AWS EC2 server** and later adapted the mobile frontend to align with a revised backend API ecosystem.
- Collaborated closely with backend engineers to define API contracts, refine payload structures, and ensure seamless frontend-backend integration.
- Managed **iOS build provisioning**, **signing certificates**, and **deployment workflows** within **Xcode**.

WonderTech

Karachi, Pakistan

Junior Back-end Developer

06/2023 - 01/2024

- Built two separate back-end modules of a robust Edtech mobile application that empowered parents to find suitable tutors, schedule tutoring sessions, and monitor their child's learning progress.
- Implemented **RESTful APIs** for **20 functionalities** using the **MVC architecture** ensuring scalability, maintainability, and optimized performance across the application.
- Designed and developed relational database schema of the whole app consisting of 17 tables.
- Utilized **Node.js** and **Express** for back-end development, integrated **MySQL** with **Sequelize ORM** for efficient database management, and ensured smooth deployment using **Git** and **cPanel**.

Projects

X-RAY Auto Reporting System (FYP)

A [web-based application](#) designed for automated Chest X-Ray reporting in Collaboration with **Indus Hospital**, Pakistan

- Spearheaded the development of a **deep-learning** based chest X-ray auto-reporting system aimed at revolutionizing detection of pneumonia in chest x-rays by **98%**.
- Leveraged advanced **machine learning** models, utilizing **ResNet50** for **feature extraction** and a **convolutional neural network (CNN)** for **model training**.
- Implemented a bulk upload functionality for efficient classification, showcasing expertise in **image processing**, **feature extraction**, and **model training**.
- Developed web application using **MERN Stack** to provide a user-friendly interface for uploading and analysing X-ray images.

Cloudlit's Website

Responsive and **live** company [website](#) for a growing cloud-based startup.

- Launched a fully responsive and scalable **React**-based company website for a cloud-based startup, within a demanding timeline of 30 days.
- Ensured compatibility and seamless performance across **20+** device models and browsers.

Skills

Languages: Java • JavaScript • SQL • Python

Frameworks: Flutter • React • Node.js • GitHub Actions

Developer Tools: Git • Docker • VS Code • IntelliJ • Postman • Xcode • AWS

Databases: MongoDB • SQL Server
